

## Paul's Custom Trike Showcases How Cool Recycling Can Be!

Paul Troiano knows how to build more than drums, as shown off by his custom Trike made out of recycled and reused materials. During the workweek, Paul is the head of plant maintenance at Myers Container/CMS new drum manufacturing facility off of Killingsworth St. in Portland, Oregon. But after work gets out, Paul's passion is custom fabrication of things that aren't just impressive to look at, but fun to drive as well.

Troiano has always enjoyed building things, and he doesn't plan to stop. His friends have even been asking him to build and sell more custom cycles, and Paul says that he already has a couple orders in. What makes Paul's Trike so fascinating is the fact that it is built with almost all recycled or reused parts. Paul says that "using recycled parts not only make this Trike one-of-a-kind, but they also make it more fun to build, because you are always looking out for a cool new part or figuring out how to make all the eclectic parts mesh together in a way that works." In an age where resources are increasingly scarce, Paul shows us how a recycled bike can be every bit as desirable, if not more so, than an Orange County Chopper.

This Trike is so unique, that when Myers/CMS' CEO, Kyle Stavig, saw it, he knew that this bike represented his company's future: it is a world-class custom solution, mixing the best of the past with a progressive vision of the future, and tooled to perfection. Well, the timing couldn't have been

better. Myers Container/CMS itself has recently begun offering a range of recycling solutions, from industrial plastics to household containers, pallets, and buckets, and Paul's cycle only helps to bring the importance of recycling to the forefront of people's minds.

In fact, Troiano's cycle will be showcased at the Northwest Food Processor Association's trade show this week, where Stavig hopes the bike will be a great and fun way to get people thinking about recycling and sustainability. Says Stavig, "Paul's Trike shows the commitment of our team to keeping our landfills empty and reducing our footprint—we aim to bring that same passion to our customers' recycling solutions."
